

Starter Kits Vs Advanced Kits

Starter Kits

Advanced Kits

7W - 15W	Power	Typically 35 - 80 watts Increased wattage allows vaporisation of thick, high VG liquids.
650 mAh - 1000 mAh The larger the capacity, the longer the battery will last longer in-between charges.	Battery Capacity	2000 mAh + Advanced Kits operate at higher temperatures therefore require more battery life.
1.0 - 1.8 Ohms Operates at low temperatures - ensuring that low-viscous Premium Liquids are not over-vaporised. Too much heat would burn the atomiser's cotton wick.	Coil Resistance	0.2 - 0.5 Ohm Operates at high temperatures - optimum for vaporising high VG Cloud Liquids.
Variable Airflow Allows you to minimise or maximise the amount of vapour that can be inhaled.	Advanced Features Not available on all models	Variable Airflow Allows you to minimise or maximise the amount of vapour that can be inhaled. Temperature Control Allows you to set a desired temperature at which the liquid is vaporised. Flavours can taste different when the temperature is adjusted.
70PG / 30VG Premium Liquids	Liquid Type	70VG / 30PG Cloud Liquids (Not compatible with Mini Kit) 50PG / 50VG Cloud Liquids
Nicotine Cravings Use with Premium Liquids - available in 0mg, 6mg, 12mg and 18mg nicotine strengths, providing that nicotine-hit similar to cigarettes.	Best For	Lots of Vapour and a Wide Range of Flavours Use with Cloud Liquids - available in an extensive range of rich flavours and comes in 0mg, 3mg and 6mg nicotine strengths.
